# Lorenzo Fumagalli

**Senior Mobile Engineer & Technical Lead**
Milano, Italia | lorenzo95fumagalli@gmail.com | https://www.linkedin.com/in/lorenzofumagalli0

## PROFESSIONAL SUMMARY

Mobile Technical Lead and Mobile Architect with over 6 years at Deloitte building and evolving the Calzedonia Group apps (Tezenis, Calzedonia, Intimissimi): over 1.5 million installs, a rating of around 4.5 on Google Play, over 230K monthly active devices on Android (about twice as many on iOS) and 99.9% crash-free users. I lead a cross-functional team of Android, iOS and Backend developers and define the architecture of enterprise Fashion/Retail applications. I drove the migration to Jetpack Compose, Ktor, and Koin, combining native Android expertise with mobile architecture and Agile Scrum leadership.

## TECHNICAL SKILLS

- **Key Strengths:** Mobile Architecture, Technical Leadership, Android (Kotlin, Jetpack Compose), Kotlin Multiplatform, Agile Scrum, Code Review & Mentoring, Unit Testing, Architectural Migrations, Android/iOS Team Coordination
- **Daily Production Use:** Kotlin, Jetpack Compose, Coroutines, Ktor Client, Koin, MVVM, Clean Architecture, Room, Firebase, Git, CI/CD (Fastlane), Jira, ServiceNow, YouTrack
- **Solid Experience:** Java, XML UI, Retrofit, Hilt, TypeScript, Node.js, SQL, Ktor Backend
- **Projects & R&D:** Kotlin Multiplatform (KMP), Compose Multiplatform, Flutter, MQTT, Python (automation), C / C++ (PoC)
- **Coordination:** iOS (native), in the role of project Mobile Architect

## PROFESSIONAL EXPERIENCE

### DELOITTE | Milan, Italy

**Senior Consultant / Mobile Technical Lead** | *June 2023 – Present*
**Consultant / Android Developer** | *December 2021 – June 2023*
**Analyst / Android Developer** | *May 2020 – December 2021*

**Core Project: E-commerce & Loyalty Applications (Calzedonia Group: Tezenis, Calzedonia, Intimissimi)**

- **Team Leadership & Agile:** Coordinated a cross-functional team of 3 Android and 5 iOS developers day to day, as Mobile Architect of the project: I define the architectures, run high-level analysis of new features, design the flows and delegate development. Served as the primary technical liaison with the backend team and end clients, facilitating delivery under the Agile Scrum framework.
- **Role Progression:** Three roles on the project, always contributing to the evolution of the live apps as well.
    - Analyst (May 2020 – December 2021): Android developer on **Tezenis**, plus client PoCs and SDKs (see below).
    - Consultant (December 2021 – June 2023): Android development starting on **Calzedonia**, with continued work on the live apps.
    - Senior Consultant (June 2023 – Present): Mobile Architect and technical lead of the project, extending to **Intimissimi**.
- **Architectural Evolution:** Defined technical guidelines and ensured code quality through systematic Code Review and unit tests on individual components. Spearheaded, between 2021 and early 2022, the architectural migration of flagship apps under MVVM / Clean Architecture:
    - Fully transitioned UI layers from legacy XML to **Jetpack Compose**.
    - Refactored the network layer from Retrofit to **Ktor**.
    - Migrated Dependency Injection from Hilt to **Koin**.
- **Backend & Gamification:** Developed the dedicated Loyalty and Gamification solution: frontend and backend in TypeScript and Node.js, with the game built on Phaser 3, integrated with the native Android apps.
- **Measurable Results:**

    - Successfully scaled applications to over **1.5 Million installs** across the Calzedonia Group apps, rated around 4.5 on Google Play.
    - Maintained **99.9% crash-free users** (Tezenis for 5 years, Calzedonia and Intimissimi since go-live), monitored via Firebase.
    - Over **230K monthly active devices** on Android, with about twice as many on iOS.

**Additional Projects at Deloitte (Role: Analyst):**

- **Enel SpA (Energy):** Developed a Proof of Concept (PoC) for VoIP feature integration. Successfully resolved technical complexities by building a communication bridge between a native C++ SDK and the Xamarin framework.
- **Chef Express SpA (Food Service):** Implemented a native Android SDK (Java + JavaScript) for automated client device authentication and seamless connection to store Wi-Fi access points.
- **Estra SpA (Energy):** Conducted core bug-fixing and code stabilization activities on native Android Java codebases.

# INNOVATION & SIDE PROJECTS

- **Process Automation (Python):** Designed and developed custom Python bots that automatically sync and track delivery tickets between Jira and YouTrack, plus a second version integrating ServiceNow with YouTrack, optimizing workflow efficiency for the Deloitte delivery team.
- **Onboarding & Training Backend (Ktor):** Engineered a simulation micro-backend in Ktor used as a training sandbox, making onboarding of new technical recruits simpler and leaner.
- **R&D Mobile Exploration:** Actively experimenting with real-time communication protocols (MQTT in Android environments) and developing cross-platform side projects using Kotlin Multiplatform (KMP) with Compose Multiplatform and Flutter.

# EDUCATION

- **M.Sc. in Computer Science Engineering** | *Politecnico di Milano (2017 – 2020)*
    - Major focus: Artificial Intelligence, Robotics and Computer Vision.
- **B.Sc. in Computer Science Engineering** | *Politecnico di Milano (2014 – 2017)*

# LANGUAGES

- **Italian:** Native
- **English:** Fluent (Business English)

*I hereby authorize the processing of my personal data pursuant to Italian Legislative Decree 196/2003 and the GDPR (EU Regulation 2016/679).*
